Education

Livingstone College — Salisbury, NC
B.S. Computer Information Systems | Minor in Mathematics | GPA: 3.94/4.00 — *May 2030*

Relevant Coursework: Discrete Mathematics, Calculus I, Data Structures and Analysis

Experience

Data Science & Statistical Researcher — July 2026
AUCC Data Science Center — *Atlanta, GA*

- Analyzed **28K+ CDC survey records** in **R/RStudio** using regression and hypothesis testing to identify demographic predictors of youth e-cigarette use.
- Led statistical testing and literature review for a **5-person team**, identifying age, sex, and grade level as significant risk factors.
- Presented findings to **200+ attendees** at AUCC PFx and earned **best research project among 49 teams**.

Machine Learning Researcher — Apr. 2026 – Aug. 2026
Youth In AI Research Lab — *Accra, Ghana*

- Built an **LSTM** flood-risk classifier using **12 years** of weather, time-series, and geospatial data, achieving **93% accuracy**.
- Benchmarked **LSTM, Random Forest, and XGBoost** with cross-validation; the LSTM outperformed alternatives by **12%**.
- Engineered **Python** and **Google Earth Engine** pipelines to extract **18 flood-risk indicators** for model features.

Data Analytics Engineer — Mar. 2024 – Jul. 2025
alkeBULANPrints — *Maryland, US (Remote)*

- Analyzed customer and sales data to identify high-value segments, contributing to a **45% sales increase** in **6 months**.
- Built **Power BI** and **Excel** dashboards with **SQL, DAX, and Power Query**, enabling **10x faster** decision-making.
- Automated analytics refresh workflows, cutting recurring reporting from **5 hours to minutes**.

Projects

LC Shuttle System | *React, Node.js, MongoDB, WebSockets* | GitHub

- Built a full-stack campus shuttle management system with **React, Node.js, and MongoDB** for campus transportation.
- Integrated **WebSockets** for real-time shuttle updates to students and drivers.
- Implemented user authentication and backend APIs for core application workflows.

Stroke Risk Analysis & Prediction | *TensorFlow, scikit-learn, Streamlit* | GitHub

- Analyzed **4,908 patient records** and identified **6 clinical and lifestyle risk factors** through EDA and feature importance.
- Built a **TensorFlow** neural network with **94% accuracy**; handled class imbalance with **SMOTE/class weighting** and validated **ROC-AUC** and **F1**.
- Deployed a **Streamlit** app that applies the saved preprocessing pipeline and returns real-time stroke-risk probabilities.

Grade Prediction System | *scikit-learn, FastAPI, React* | GitHub

- Trained a **Random Forest** on **25,000 student records** to predict A–F grades with class probabilities, reaching **88% test accuracy**.
- Benchmarked **Random Forest, Gradient Boosting, and Logistic Regression**; feature engineering improved baseline performance by **7.1%**.
- Built a **React + FastAPI** application serving real-time predictions through an interactive interface.

Leadership & Community Involvement

Founder — Jan. 2025 – Present
Campus Innovation and Research Network (CIReN) — *Ghana*

- Founded CIReN to expand student access to research, programming, and innovation opportunities across Ghana, securing corporate partnerships to support technical programs.
- Organized **5 hackathons** and established clubs at the University of Ghana and Central University, plus a community tech space in Keta.

Media & Communications Volunteer — Jan. 2025 – Mar 2026
Spark Educational Equity Foundation (SEEF) — *Ghana*

- Managed digital communications and produced weekly email newsletters for **300+ volunteers**, promoting educational initiatives and program updates.
- Helped organize **4 outreach programs across 4 schools**, delivering educational resources to **200+ students**.

Technical Skills

Languages: Python, JavaScript, SQL, C++, R, Java
Frameworks & Libraries: React, Node.js, FastAPI, Streamlit, scikit-learn, TensorFlow, PyTorch, XGBoost
Tools & Data: Git/GitHub, MongoDB, Render, Hugging Face Spaces, Google Earth Engine, Power BI, Excel, DAX, Power Query
